

Do you want to work for a multiple award-winning WealthTech 100 company?

3rd-eyes analytics empowers financial institutions to deliver goal-based investing with realistic and scenario-based asset liability management methods, integrating sustainable investing in all steps of the advisory process. We support the transformation of the wealth management and insurance industry with our modern, interactive and omnichannel advisory solutions. We offer our solutions with highly customisable and flexible frontends or just with REST API only as Software-as-a-Service.

We are expanding our team and are looking for a:

Senior DevOps Engineer (m/f, 80-100%)

Your qualification

DevOps engineer with high affinity for security, passionate about software development. You have at least 5 years of experience as Full Stack Software Engineer developing applications with .NET core, C#, Python, OpenAPI, Angular, RabbitMQ, Azure. You also have extensive experience in DevOps and agile processes. You are well versed in Kubernetes, Docker, Terraform and Jenkins. Experience with Julia, Sonarqube, Prometheus and Atlassian a plus. English is a must. Experience in the financial services sector is considered an advantage.

Your tasks

- You are the interface to our software development team in several regions and the sparring partner to the software engineers and to the CTO. You contribute to the overall architecture and DevOps processes.
- You drive code-reviews and test-driven development in an agile environment
- You plan and code innovative functions for our customers

We offer

- Growth perspective in a very dynamic environment
- Possibility to grow into a leadership role
- Entrepreneurial environment with creative freedom
- Flexible work-life balance with the option of partially working from home

For this position, we only accept direct applications. If you are interested, please send all relevant documents (CV, references) as email to hr@3rd-eyes.com.
