

Award-winning WealthTech is hiring a Senior DevOps Engineer (100%)

We are a small purpose-driven company that lives values such as trust and teamwork. Sustainability is close to our hearts. We strive to find committed people with entrepreneurial mindsets who believe life is fast-paced. We are looking for future team members that want to go the extra mile while having the liberty to work the way they prefer. Our team is made up of motivated people who enjoy nature and outdoor activities and professional challenges within an appreciative team. If you identify with a start-up mentality in a growth-stage company and identify with our core values, you will fit right in.

3rd-eyes analytics is a WealthTech and Insurtech company that is revolutionizing wealth planning. Our innovative software solutions enable our clients to provide goal-based investment advice and include sustainability in every step of the advisory process. We offer our solutions through either highly customizable and flexible user experiences or as a family of REST APIs. The development team consists primarily of senior software engineers and quants who use several modern languages and frameworks including, but not limited, to Julia Lang, .NET, Angular, NodeJS and ReactJS.

Your qualification

- Strong technical leadership skills, with the ability to create team consensus and to deliver on the platform roadmap.
- Proven experience in a DevOps role with hands-on experience in cloud infrastructure management. Hands-on experience with Microsoft Azure is a strong plus.
- Strong experience with CI/CD tools such as Jenkins, Gitlab, ArgoCD.
- Proficiency in scripting and automation (Bash or equivalent)
- Experience with containerization and orchestration technologies such as Docker and Kubernetes (AKS)
- Knowledge of monitoring and logging tools such as Prometheus, Grafana, Loki.
- Strong experience with infrastructure-as-code tools like Terraform or Pulumi.
- Fluency in English is required.

Your tasks

- Work together with the CTO on developing a pragmatic roadmap for the DevOps function.
- Oversee the design, implementation, and maintenance of our cloud-based infrastructure, ensuring scalability, security, and reliability.
- Collaborate with the development and quant teams on continuously improving application delivery.
- Identify and implement DevOps best practices, tools, and processes to optimize software development and deployment workflows.
- Perform system monitoring, performance tuning and troubleshooting to proactively identify and resolve issues.
- Develop and maintain documentation, including architectural diagrams, standard operating procedures, and deployment guides.
- Lead other DevOps engineers, providing guidance, mentorship, and support.
